AIC Germany Automotive Components

PRODUCT GROUP INFO | ENG

Repair kits.
A clever idea!

EXAMPLE ITEM*
AIC item no.: 75796Set
OE ref no.: 1J0 407 255AH

EXAMPLE ITEM*
AIC item no.: 74779Set
OE ref no.: 246 377 0495

5 YEARS WARRANTY up to 75,000 km

FROM COMPETENCE **TO EXCELLENCE.**

Convenient set solutions with **pre-assembled components**

Why complicate things when you can do it quickly and easily? When a driver accidentally hits a curb or misses a pothole, the problem is often the steering knuckle on the affected wheel. If a component needs to be replaced, AIC Germany offers a convenient repair solution with its steering knuckle kits. The kits contain all the necessary components for a quick and efficient replacement. The steering knuckle, wheel bearing, wheel hub, and splash panel are delivered as pre-assembled components ready for installation. Depending on requirements, the kits also include small parts such as bolts and nuts for the drive shafts.

Example item*

APPLICATIONS:

- Replacement in the event of accident or corrosion damage.
- Repairs to restore axle geometry.
- Maintenance and improvement of driving safety.

AIC Germany already offers 50 pre-assembled steering knuckles for nearly 9,500 vehicle applications.

As of October 2024

BENEFITS:

Time savings in the workshop: All relevant parts are included in the set and some are even pre-assembled, eliminating the need for time-consuming individual procurement. This significantly reduces labor requirements.

Easier assembly: Precisely fitting parts simplify installation and reduce the risk of assembly errors.

Durability and safety: All included components are manufactured to a high standard and ensure optimal driving stability and safety.

CONCLUSION:

A steering knuckle kit is the ideal solution for a quick, safe, and cost-effective chassis repair. By providing a complete set of all relevant components, workshops save time and money and can offer customers a long-lasting and safe repair.

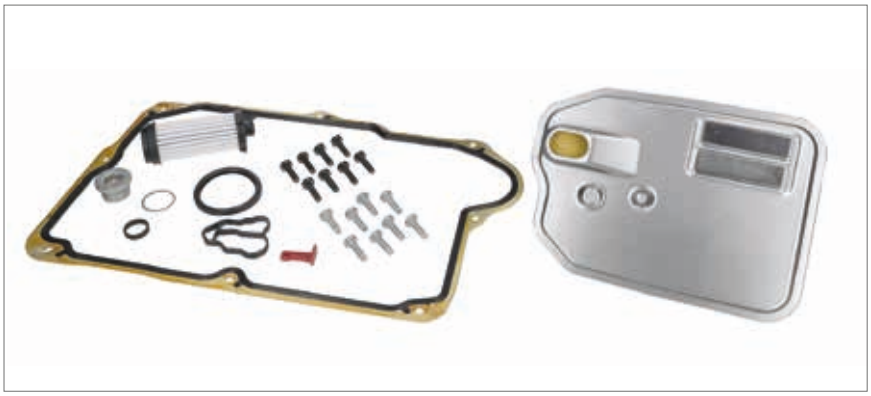
One click – one kit.
Order quickly, save time.

An oil change isn't rocket science and can be done quickly by a professional. It's also no secret that the filter, seals, and drain plug should also be replaced at the same time. However, the ordering process for all the required individual parts often takes almost as long as the actual job under the lift itself. It's frustrating when something is forgotten in the hustle and bustle of everyday life, or one part doesn't fit together. That's why AIC Germany offers transmission oil kits that contain all the parts required for an oil change, from German brand oil to the filter, seals, and drain plug – and can be ordered quickly and easily with just one click.



Example item*

WHY CHANGE THE TRANSMISSION OIL?

Reduced wear: Fresh transmission oil minimizes wear on clutches and gears.

Improved shifting performance: Old oil can lead to jerky or delayed gear shifts.

Temperature resistance: Clean oil ensures better heat dissipation and reduces thermal stress.

Extended service life: Regular oil changes prevent transmission damage and increase mileage.

BENEFITS:

Complete solution: Contains all necessary components such as transmission fluid, seals, filters, and bolts.

Manufacturer-compliant quality: The kits comply with OEM specifications and protect the vehicle warranty.

Easy application: Perfectly tailored to all common vehicle models to simplify the maintenance process.

CONCLUSION:

Modern vehicles with DSG, automatic, or CVT transmissions require regular maintenance to ensure optimal performance and longevity. An AIC Germany smart**KIT** provides all the necessary components for an efficient and professional transmission fluid change.
